

Crydom | **Short Circuit Current Ratings**

Crydom strives to provide the best technology and value in the Solid State Relay Market. Our products and technology are unsurpassed and we support an aggressive continuous improvement program and new product development plan.

In 2006, Crydom pioneered the testing, qualification and rating of Solid State Relays to UL 508 for Short Circuit Current Ratings (SCCR). Crydom products have carried some of the highest and most extensive ratings available for any SSR in the industry with equivalent output ratings.

Please be advised that although our products are of the same design, specification, construction and performance, we have elected to discontinue our support of the UL SCCR ratings. We regret any inconvenience this may present to our valued customers.

Please feel free to contact your local Crydom Distributor, Crydom Sales Manager or Crydom Technical Support for additional information or assistance.
